

S+ACADEMY LAB

PASSIVE ARCHITECTURE

SYNOPSIS

The idea of Passive Architecture refers to a set of strategies aimed at ensuring thermal, acoustic, and lighting comfort inside a building, making it a self-regulating agent that seeks to eliminate the use of mechanical systems. In this way, there are fundamental principles behind the concept of a passive house, as well as certifications that accompany them, which confront the reality of construction in Portugal and the regulations currently in force.

SPEAKERS

Margarida Marques,
Architect of the S+A Internship Program
